Application/Control Number: 10/033,518

Art Unit: 3634

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3-5, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keys in view of Japanese patent No. 11-279290. Keys discloses a weather seal and process of forming the weather seal comprising a wire core on a spool, a first layer of material (EPDM)(17) encapsulating the wire core (16), chemical bonding adhesive, a second layer of material (21) encapsulating the first layer (17) and the wire core (16) wherein the first and second layers are extruded to form a weather seal. Keys fails to provide the first layer to be of recycled material. Japanese patent No. 11-279290 discloses a weather seal formed of recycled material. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the first layer of Keys to be formed of recycled material as taught by Japanese patent No. 11-279290 since it's well known that recycled material is cheaper to manufacture without sacrificing quality of the material.

Claims 2, 6, 7, 9, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keys and Japanese patent No. 11-279290 as applied to claim 1 above, and further in view of Vinay. All of the elements of the instant invention are discussed in detail above except providing the wire core to be looped. Vinay discloses a weather seal having a core formed of wire looped. It would have been obvious to one of ordinary skill in the art at the time of the invention to form the core of the weather seal

Application/Control Number: 10/033,518

Page 3

of Keys with loops as taught by Vinay since loops allows the core to be better reinforced by providing more surface are within the weather seal.

Any inquiry concerning this communication should be directed to Jerry Redman at telephone number 703-308-2120.
